FYI – Preliminary results for all nine Metals samples, including three needing digestion.

For drinking water samples, the action level for lead is 0.015 mg/L. Note that the three digested samples (lower half of the spreadsheet) show between 3 and 5 times the action level, while the six samples that were undigested show considerably lower levels of lead.

I've also faxed the results.

Subject: FW: Priority 1 Animas river samples

Attached are preliminary results for nine priority 1 samples.

Please note that my earlier e-mail attachment incorrectly listed the results as ug/L (ppb)...they should be mg/L (ppm).

Also the earlier list has incorrect RID#s.

This list has been corrected.

Subject: RE: Priority 1 Animas river samples

Attached are preliminary results for six priority 1 samples that did not require digest.

All initial QC looked good for this ICP_MS analysis.

Although the last three were for AI Only I include the other results as they were available.

No unusual results were noted.

Subject: RE: Priority 1 Animas river samples

Thanks Jodey – quick update from the lab – we expect preliminary results for the six Priority 1 samples that don't require digestion for Metals by this afternoon; and for the three Priority 1 total Metals samples that will require digestion, we expect have to have preliminary results by this evening. If the QC passes for each sample, they will be final results.

We'll start on the Priority 2 samples tomorrow. We will be able to send .pdf results by e-mail from the LIMS, but I will print and fax also, as a redundancy measure, just in case.

If we see high Uranium-238 in any of the samples, we'll bring Radiochemistry in also.

Just a quick clarification on the priority levels for these samples. Priority I samples are those collected yesterday, Sunday 8/9/15. Priority II samples are those collected Thurs-Sat, 8/6/15-8/8/15. Each sample on the submittal sheet has a separate column for priority level and they correctly reflect the priority levels described above. These submittal sheets have been scanned and are available from Bruce Yurdin, Shelly Lemon, or Chuck Dentino if needed

Subject: Priority 1 Animas river samples

Good morning – FYI - the Surface Water sample collectors were here this morning following the Animas river pollution event. They requested Priority 1 for the samples collected last Saturday, and I just heard from Twila that we will analyze these samples under that Priority 1 as private well water could be affected – hence it is a potential public health emergency

The samples collected last week are Priority 2. An explanation of the different priorities is attached – Priority 1 is listed on Page 9 of the second attachment. Current costs/WTUs are listed on the first attachment.

NMED will need to have a person on-call 24/7 also, to receive ‘phone calls and fax. Please can NMED provide a telephone and fax number, and the name of a responsible individual on their end?

Bruce Yurdin

217 415 8972. Cell

505 827 0160 Fax

I will stay here for as long as I can today and this evening to ensure lab safety, and send faxes or results, as necessary.

Thanks
